

# Ralicom Motorsport Communications

## User Manual

---

### Headset and helmet care

1. Always hold the communications cord **plugs** when unplugging. **NEVER** pull on the cords.
2. Take care not to force the headset microphone boom. There is a limit to the travel of a flexible microphone boom, and you could easily break an internal component.
3. Take care not to let the communications cord get caught on anything, and make sure they are safely stowed out of the way before attempting to exit the vehicle. It is easy to catch a hanging cord with an arm or leg.
4. Keep all communications equipment clean and dry.

**The headset microphone boom should be moved within the green arc only.**

Never try to move the boom into the red arc or damage will occur.
